

Your home is your retreat, the place where you go to recharge your batteries to face the world again. You've worked hard to make it a clean, restful, healthy environment. But is it? Minute particles, microbes, bacteria, and viruses contaminate indoor air, exacerbating allergies and contributing to a general feeling of listlessness and loss of energy. The revolutionary new Air Scrubber Plus technology is guaranteed to change all of that.

Unlike other passive air filters, Air Scrubber Plus actively works to reduce the contaminants and odors that may be making your home an unhealthy place to live. It is compatible with your existing HVAC system and can be easily installed by a professional technician.

The unique honeycomb design and UV light rays send out charged molecules of oxygen and hydrogen, which remove up to **99.9%** of airborne contaminants in your house. As well as indoor air, the Air Scrubber Plus cleans contaminants off all indoor surfaces – countertops, ducts, door handles – where microbes and bacteria grow.

The cleaning process is natural and non-toxic. It was developed first by NASA to keep the air onboard the space station clean and has been tested by some of the most respected laboratories in the country. A clean home is really just a switch away. Give us a call and let's talk about improving your home's air quality today! **484-617-3619**
